*<http://my.cs.lmu.edu/~mfraser1/ubuntu-kernel-howto/>*

*1a* — With this assignment, you have cemented your ability to be productive at the command line. (+)

*2a* — Congratulations on successfully building an operating system kernel! (+)

*2b* — Your instructions provide the right information for adding a new system call to the kernel, but you have not included the demo program that shows off this system call (the one you called *helloworld.c* in your tutorial). You need that file to seal the deal (as short as it is; the fact that I do know how to do it isn't the point—the key is for you to communicate this knowledge). (|)

*4a* — Your patch is complete and correct; just the demo file is missing. (|)

*4b* — Not much to say about separation of concerns for this outcome so we consider this a “bye.” (+)

*4c* — Not much code to write here, but all the more reason for it to be readable. The code on your tutorial page and patch look clean, and for this outcome we won't count the missing actual code as much. (+)

*4d* — You have acquired the correct information needed to define a new system call and create a patch for it. As with *4c*, the information in the tutorial page is sufficient, and we won't let that one missing file hurt this outcome as much. (+)

*4e* — Commit frequency and messages are appropriate for the work done. (+)

*4f* — Submitted on time. (+)
