1	Perform operating system tasks that are typically viewed as “power user” activities.											
1a	Effectively and efficiently use a command-based operating system shell to manage and explore a machine’s processes, memory, and file system.					+	+				+	+
1b	Redirect input and output streams to and from files, processes, and networked computers.						+				+	+
1c	Interact with operating systems across the network.			+								+
2	Implement common operating system functionalities and algorithms.											
2a	Build and deploy an operating system kernel.					+						+
2b	Define, implement, and invoke a new system call.											
2c	Write a simple operating system shell.						+					+
2d	Simulate or implement standalone demonstrations of operating system scenarios and algorithms.								– +	+		+
2e	Create a virtual disk and navigate it at the byte level.											
3	Demonstrate genre literacy within the operating system field.											
3a	Perform and document operating system tasks and activities, across different platforms where applicable.			+			+					+
3b	State and describe seminal personalities and milestones from the field’s history.											
4	Follow academic and technical best practices throughout the course.											
4a	Write syntactically correct, functional code.				+		+		– /	+		
4b	Demonstrate proper separation of concerns.				+	+	+		– +	+		+
4c	Write code that is easily understood by programmers other than yourself.				+	+	+		– +	+		+
4d	Use available resources and documentation to find required information.	+	+	+	+	+	+	+	–	+		+
4e	Use version control effectively.	+	+	+	+	+		+	– +	+		+
4f	Meet all designated deadlines.	+	+	+	+	+	+	+	–	+	+	+
